

Fifth Grade Science Summer Work Science Careers

What do you want to be when you grow up? Have you thought about a career in Science? For your Science Summer Work you will be researching different science related careers and using that research to create a brochure that will inform others of one possible career option.

1. Choose a science career from this site that interests you (There are 18 pages of careers, make sure you click the next page to explore):
<https://www.sciencebuddies.org/science-engineering-careers>.
2. Create a trifold brochure that includes the following information:
 - A. Describe what you would be doing in this career.
 - B. What responsibilities does this job require?
 - C. What kind of degree or special training is necessary for this career?
 - D. How much in salary would you make doing this job?
 - E. Discuss why you choose this career?

Trifold Brochure Example:

You will use the front and back of this brochure to create your summer science project. You will need to plan what information will go in each section. Remember, there are six sections in total and one section should be a title page with a picture related to the described career and your first and last name. You are welcome to type or hand write your information.

These brochures will be due the first week of school.
